Invacare® Oxygen Cylinder Carrier

Using molded plastic technology, the Oxygen Cylinder Carrier is specifically designed to transport oxygen cylinders in the trunk of your car. Fastened with velcro strips to the trunk floor, the Carrier cradles the cylinders and prevents them from rolling around during travel. Manufactured in ABS, which provides durability, strength and dependability, the Oxygen Cylinder Carrier can carry up to two cylinders at a time.

Using the Oxygen Cylinder Carrier

Model No. OCC100

- Ensure all obstacles which may inhibit the Carrier from sitting flat on the floor of the trunk are removed.
- Place empty Carrier on the floor of the trunk, with the velcro found on the underside of the carrier attaching to carpet.
- Place cylinder(s) into the carrier, using the spacer provided when transporting two C-sized tanks.
- Attach two velcro straps, found on the side of the Carrier device, over the tank(s) and affix to the other side for a secure fit.
- The Oxygen Cylinder Carrier can be cleaned using soap and water.

*The OCC100 is designed to carry one E-sized, one D-sized or two C-sized post-valve cylinders.
